For us the module 4 has remind us show we established our own evaluation process some years ago.

For us evaluation is one of the most important things to engage the students. If they have a clear picture on know how are they going to learn, what is the goal, what the teachers expect from them we get to focus them better and get them more involved.

We agree the evaluation process must involve the whole educative community (not only the teachers but also the students, the whole teachers team, the school director and the families).We highlight the importance of the students being involved in the evaluation process because they get more involved with their learning and with the school life. Students must be aware from the very beginning how the evaluation is going to be, what is it going to take into account and how. All these information is explained in the class and provided in a written guide provided to students at the beginning of the school year. This way students know exactly what the teachers expect from him/her.

We agree the evaluation must start at the beginning of the learning process. Evaluation must help to identify what should be improved during the process. Evaluate only at the final of the process don't help improving, only points out the student lack if competences.

We deeply agree on the importance of qualitative evaluation. A numeric marc must always have a report attached explaining the reasons for that result.

As a conclusion, we deeply agree with the ideas of the module 4, we agree with it and actually do most of the things mentioned on it. Both the sources and the steps that we followed when we elaborated our evaluation process are similar to the ones described in the module. In this sense it has been rewarding to remind what we did while reading the module and confirm that we are doing it well ;-)
