Conclusions:

The lecture of module 5 has help to reflect about how we work with external people/organizations.

Although we always have an informal communication with families there is a need to formalize it better, in a more structured way.

We have very different profile of students but we should have a thought on the organizations that are also dealing with them (job office) and try to establish agreements and protocols of collaboration with them. For example we could meet the employment office of our town and ask them to point out to our students the importance of being well trained no matter the job they want to do.

So one conclusion is this need to analyze the local agents that could possibly help.

The videos also have been very inspiring. Some ideas are proposed using videos to get the students attention. It is a good tool to communicate with this target. We have conclude that we will look for short videos to communicate some key messages like the respect for the other students, the importance of being well prepared for work, the need to let the school know if they have problems with their colleagues

It has been interesting to follow the course and specially to discuss on this topic with our colleagues after reading each module.

We need to check better the rest of the sections of the web to find some other useful document. It is a pity that a lot of document are not in Spanish
